9size by quanti and by size

Summary

INTRODUCTION

Title: From Dough to Dollars: Optimizing Pizzeria Performance

Body:

"This portfolio piece simulates a real-world business scenario: How can a pizza chain increase revenue and streamline operations? Using SQL for querying and pivota tables for visualization, I transformed raw order data into actionable insights. The dashboards presented here answer key business questions regarding peak order times, category performance, and the correlation between pizza size and revenue."

PIZZA SALES ANALYSIS

TOTAL ORDERS
21350

QUANTITY SOLD
49574

TOTAL REVENUE
817860.05

AVERAGE ORDER
38.31

SALES BY WEEKEND AND WEEKDAYS

SUMMARY

WEEKDAYS GENERATE MORE SALES OVERALL
ORDERS: WEEKDAYS HAVE ALMOST 3× MORE ORDERS THAN WEEKENDS.
REVENUE: WEEKDAYS GENERATE SIGNIFICANTLY MORE REVENUE ($\approx$ 595K VS 222K).
👉 THIS SUGGESTS YOUR BUSINESS IS MORE ACTIVE DURING WEEKDAYS.

SALES BY PIZZA TYPE

ORDERS BY DAY TIME AND BY WEEKS

INSIGHTS

- Highest AOV → Afternoon (40.69)
 - Lowest AOV → Night (34.64)
 - Morning & Evening are similar
- ☞ Customers spend more per order in the afternoon.

REVENUE BY DAYS OF THE WEEK

- ## KEY INSIGHTS
- 📈 **PEAK DAY: FRIDAY LEADS WITH 3,538 ORDERS AND \$136,074 IN REVENUE**
 - 📉 **LOWEST DAY: SUNDAY HAS THE FEWEST ORDERS (2,624) AND LOWEST REVENUE (\$99,204)**
 - 📊 **TREND: ORDERS AND REVENUE STEADILY INCREASE FROM MONDAY THROUGH FRIDAY, THEN DECLINE OVER THE WEEKEND**

Category Revenue Analysis

Total Revenue by Category

Revenue Distribution by Category

Monthly Revenue Trend

MONTHLY REVENUE ANALYSIS SUMMARY
THE BUSINESS SHOWS RELATIVELY STABLE REVENUE PERFORMANCE THROUGHOUT THE YEAR, WITH NOTICEABLE PEAKS IN JULY, MAY, AND NOVEMBER, INDICATING STRONG MID-YEAR AND PRE-FESTIVE DEMAND. REVENUE DECLINES SLIGHTLY DURING FEBRUARY, SEPTEMBER, AND OCTOBER, SUGGESTING POTENTIAL SEASONAL SLOWDOWNS. OVERALL, THE UPWARD SPIKES AND CONSISTENT AVERAGES REFLECT HEALTHY DEMAND, WHILE LOWER-PERFORMING MONTHS HIGHLIGHT OPPORTUNITIES FOR TARGETED PROMOTIONS AND DEMAND-STIMULATION STRATEGIES.

**CUSTOMERS LEAN TOWARD VALUE-
FOR-MONEY / SHARING PORTIONS
PROMOTIONS ON LARGE/XL WILL LIKELY PERFORM
WELL**

**SMALL/MEDIUM PROBABLY SERVE
INDIVIDUAL BUYERS RATHER THAN
GROUPS**

Summary

Key Insights

 The highest revenue comes from Thai Chicken

 Sales peak on [on Fridays]

 Most orders are placed around [12pm to 5pm]

 Some pizza types have low sales and could be reviewed

Capitalize on Peak Hours (Lunch: 12-1 PM, Dinner: 5-7 PM): Ensure maximum staffing in kitchen and delivery during these times to handle high volume efficiently and maintain service quality. Run targeted promotions for quick lunches or family dinners that emphasize speed and value. Pre-order incentives could smooth demand peaks. Boost Off-Peak Hours (Morning, Late Night, Mid-Afternoon): Introduce "Happy Hour" discounts or special offers on specific pizza types/combos during these slower periods to drive traffic. Target specific customer segments (e.g., offices for early afternoon snacks, late-night study groups). Address Off-Peak Months (October, November, December): Develop seasonal menus or limited-time offers (LTOs) that align with cooler weather comfort food themes. Our analysis showed top off-peak sellers often include hearty, chicken-based options. Increase marketing spend or run special holiday promotions to stimulate demand in these months. Consider loyalty program bonuses for purchases made in off-peak months to build customer retention.

3. Data-Driven Decision Making & Further Research:

Investigate Sales Drivers: Conduct further research into why certain pizzas perform well in specific periods. This could involve: Customer Surveys: Ask customers about their preferences for ingredients, flavors, and sizes, and how these change with seasons or mood. External Factors: Actively integrate and analyze external data such as local events, holidays, and weather patterns (as discussed, this requires external data acquisition) to understand their correlation with sales. Competitor Analysis: Monitor competitor pricing and promotions during peak/off-peak times and for similar pizza types. Profitability Analysis: Beyond just total sales, analyze the profitability of each pizza type, size, and combo to ensure that high-revenue items are also high-profit items. By implementing these recommendations, the pizza business can better align its strategies with customer behavior and market dynamics, leading to increased revenue and operational efficiency.
